

ABRASIVE PLASTIC MEDIA

GENERAL INFORMATION

Trade name

EMSODUR APM

Type of product

Plastic Media for modern mass vibratory finishing applications

Applications

Deburring, Polishing, Superfinishing, Edge Rounding, Smoothing, Grinding, Roughening, Cleaning, Descaling

Methods

All types of vibratory finishing, barrelling, centrifugal or spin-finish machines

Manufacturer

Emsodur AG

Less Media Usage, Higher Performance

Our Plastic Media are made from superior polyester resins and are specifically designed to increase performance and reduce consumption of media. We carry out a special heat treatment during the production to achieve a perfect polymerisation of the resin, ensuring a perfect finish and low media usage

Faster Production Cycles and easy Recycling

We source selected abrasive powders to reduce your production time. Due to this we are reducing the amount of media used, resulting in less waste of spent media

Overall reduction of your operating costs!
