

GENERAL INFORMATION

Tradename

Emsodur Anti-Stat

Type of product

Antistatic

Application

Prevents static charge in the blasting and deburring process

Methods

Injection during the process

Manufacturer

Emsodur AG

EMSODUR ANTI-STAT – YOUR BENEFITS

Emsodur Anti-Stat is used in the deflashing and blasting process to reduce or prevent the static charge of the blasting media in the blasting machine.

The Anti-Stat can be used in blasting cabinets and wheel-blasting systems. Emsodur Anti-Stat enables dust-free blasting and prevents dust from adhering to the parts. In addition, Emsodur Anti-Stat increases the lifespan of the blasting medium through more efficient blasting.

Reduces static charge of the blasting medium through constant injection during the blasting process

Allows virtually dust-free blasting and prevents dust from adhering to the parts

Use of Emsodur Anti-Stat

Dosage

Depending on the application, a mix ratio with water of 0.1% to 1% is recommended.

Available packaging

1lt, 5lt, 20lt

Emsodur is a registered trade name for products of Emsodur AG. Emsodur is produced in Switzerland and is available internationally.
